

Coated Rainware Coil

REASONS TO RELY ON ALERIS ROLLED PRODUCTS QUALITY

Precision-manufactured from the finest aluminum, our product features a baked-on finish that provides corrosion resistance and maintains color and gloss retention over time. As a result, quality seamless gutters and downspouts look and wear like new after harsh, all-season weather conditions.

COUNT ON US FOR QUALITY IN MANUFACTURING

Aleris Rolled Products's quality control process is key throughout the production of coated rainware coil.

Each and every process is focused on producing the highest quality Rainware product available today. From raw material selection to finish coating, our customers rest assured in knowing that each operation is managed by the highest standards demanded by Six Sigma and other quality initiatives.

WE BACK UP OUR PRODUCT QUALITY THROUGH PERFORMANCE TESTING

Aleris Rolled Products continues to monitor mill finish and coated samples daily for accelerated testing for corrosion and color retention performance.

This panel-testing program along with competitor sampling and testing comparisons continues to show that Aleris Rolled Products continuous cast product exceeds the performance requirements of exterior rainware product applications.

WE SELECT QUALITY COATINGS

Selecting Quality Paint

While Aleris Rolled Products maintains control of the aluminum substrate and the application of the Rainware coatings, we do not manufacture the paints utilized in our coating process.

However, to insure the paint quality matches the quality control provided, Aleris Rolled Products selects its paint suppliers with the same quality process approach in mind.

Since we are committed to the continuous improvement of our products, we also require that our paint suppliers be dedicated to working to improve the total finished Rainware product.

Over the years Aleris Rolled Product's approach toward Rainware product quality has led to significant product enhancements that make our Rainware coil the best in the market.

Coating Performance

Today's coatings have been developed and improved over the past twenty years and feature the following performance characteristics for a premium product.

- Flexibility necessary for on-site forming capabilities
- Color retention features for a long lasting quality appearance
- Mark resistance to protect the finish during forming and installation
- Optimum dirt and stain resistance for easy cleaning

Our products are widely available from Aleris Rolled Product's authorized, independent metal service centers across North America.
